

SwimPro® ASL by HAYWARD®

ADVANCED FILTRATION
TECHNOLOGY

SwimPro Filtration

The SwimPro All Season Long Filter System extends the time between cleanings, offers durability for a lifetime of trouble-free performance, and provides crystal clear pool water free of dirt and debris. Plus, the SwimPro ASL Filter System is performance-tuned with the Voyager, an energy-efficient pump with plenty of power to withstand the rigors of above-ground pool operation.

FEATURES

- Extra large filtration element features deep-pleated “V” design in a full 360° cleaning area to easily and effectively trap dirt and debris.
- Precision-engineered extruded element core provides maximum water flow, turning over the pool water quickly-resulting in fewer operation hours and reduced energy costs.
- Filter tank made from extra durable, glass-reinforced copolymer for 100% corrosion-proof performance.
- Single locking knob securely fastens head to tank - no bolts, no clamps, no leaks!
- Performance-tuned to the Voyager pump for total hydraulic teamwork and crystal clear, sparkling water.
- Diverter valve with union connector provides ability to easily vacuum to waste.
- Deluxe, corrosion-proof elevated platform base keeps filter and pump high and dry in heavy rain.
- Base also serves as a baffle to reduce system operating noise.

SPECIFICATIONS

FILTER TYPE	175 ft ² SwimPro®
FILTER TANK	High-Strength, Injection-Molded PermaGlassXL™
FILTER ELEMENTS	Reinforced Polyester Element Filter
DIMENSIONS	42.5" H x 13.375" W
